45 The compounds of the invention possess valuable pharmacological properties and are thus suitable for use as active ingredients in medicaments.

Of the substances of the invention listed, some, e.g. 3-hexadecylthio-2-0-methylcarbamoyl-propane-1,2-diol-1-0-phosphocholine, or 2-0-ethylcarbamoyl-3-octadecylthio-propane-1,2-diol-1-0-phosphocholine, are particularly preferred. The said compounds can be used for the treatment of high blood pressure, various 50 rheumatic and some atherosclerotic conditions as well as for tumour therapy in humans.

The compounds of formula I are administered in the form of pharmaceutical preparations for enteral, oral, rectal as well as parenteral administration, and they contain the pharmaceutical active ingredients alone or together with a conventional pharmaceutically usable carrier material. Advantageously the pharmaceutical presentation of the active ingredient is in the form of single doses, which are adapted to the desired mode of 55 administration, e.g. tablets, dragees, capsules, suppositories, granulates, solutions, emulsions or suspensions. The dosage of the compounds of formula I lies normally between 1 and 1000 mg. per dose, preferably between 1 to 10 mg. per dose, and can be administered once or more times, preferably 2 to 3 times, daily.

Also preferred are compounds, e.g. 3-hexadecylthio-2-0-hexadecylcarbamoyl-propane-1,2-diol-1-0-phosphocholine, which possess clear advantages compared with the natural or synthetic 1,2-diacyl-glycero-3-phosphocholines (e.g. GB-PA-1,523,965) previously used in liposome technology, since they, in contrast to the latter phospholipids, are resistant to phospholipase A<sub>2</sub> and thus permit better transfer of the included active 60 ingredient at the site of their effect.

The invented substances of the formula I in which R<sup>2</sup> = H are prepared by reaction of the lyso-compounds II, wherein R<sup>1</sup> has the meaning given in formula I, with the corresponding alkyl or aryl isocyanates of the formula III.

The reaction is usefully carried out in organic aprotic solvents e.g. chloroform, acetone, dimethylformamide or mixtures thereof, with optional use of a catalyst, especially a Lewis base, e.g. triethylamine, pyridine, 25 dimethylaminopyridine, dimethylformamide, at temperatures between 0° and 100° C, preferably 400° to 60° C.

As starting compounds of the formula II there may be mentioned:

3-Decylthio-propane-1,2-diol-1-0-phosphocholine,  
 3-undecylthio-propane-1,2-diol-1-0-phosphocholine,  
 3-dodecylthio-propane-1,2-diol-1-0-phosphocholine,  
 30 3-tridecylthio-propane-1,2-diol-1-0-phosphocholine,  
 3-tetradecylthio-propane-1,2-diol-1-0-phosphocholine,  
 3-pentadecylthio-propane-1,2-diol-1-0-phosphocholine,  
 3-hexadecylthio-propane-1,2-diol-1-0-phosphocholine,  
 3-heptadecylthio-propane-1,2-diol-1-0-phosphocholine,  
 35 3-octadecylthio-propane-1,2-diol-1-0-phosphocholine,  
 3-nonadecylthio-propane-1,2-diol-1-0-phosphocholine,  
 3-eicosylthio-propane-1,2-diol-1-0-phosphocholine,  
 3-oleylthio-propane-1,2-diol-1-0-phosphocholine,  
 3-linoleylthio-propane-1,2-diol-1-0-phosphocholine,  
 40 and the lyso-compounds can be used in their R- or S-form or as a racemic mixture.

As starting compounds of formula III there may be mentioned:

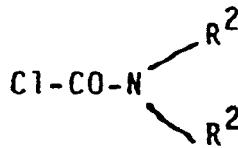

methyl isocyanate, ethyl isocyanate, propyl isocyanate, isopropyl isocyanate, allyl isocyanate, butyl isocyanate, pentyl isocyanate, hexyl isocyanate, decyl isocyanate, undecyl isocyanate, dodecyl isocyanate, tridecyl isocyanate, tetradecyl isocyanate, pentadecyl isocyanate, hexadecyl isocyanate, octadecyl isocyanate, 45 nonadecyl isocyanate, eicosyl isocyanate, oleyl isocyanate, linoleyl isocyanate, phenyl isocyanate, 2-fluorophenyl isocyanate, 3-fluorophenyl isocyanate, 4-fluorophenyl isocyanate,  
 2-chlorophenyl isocyanate, 3-chlorophenyl isocyanate,  
 4-chlorophenyl isocyanate, 4-bromophenyl isocyanate,  
 2-methylphenyl isocyanate, 3-methylphenyl isocyanate,  
 50 4-methylphenyl isocyanate, 2-methoxyphenyl isocyanate,  
 4-methoxyphenyl isocyanate, 2-ethoxyphenyl isocyanate,  
 4-ethoxyphenyl isocyanate, 2-(trifluoromethyl)-phenyl isocyanate, 3-(trifluoromethyl)-phenyl isocyanate, benzyl isocyanate.

The 3-alkylthiopropane-1,2-diol-1-0-phosphocholines of the formula II used as starting compounds can be synthesized from the corresponding 2-0-acyl-3-alkylthio-propane-1,2-diol-1-0-phosphocholines by conventional procedures, e.g. by enzymatic splitting (Phospholipase A<sub>2</sub>) or mild alkaline hydrolysis.

The 3-alkylthio-2-0-disubstitutedcarbamoyl-propane-1,2-diol-1-0-phosphocholines of the formula I can be synthesized from the said lyso-compounds II by reaction with disubstitutedcarbamic acid halides, especially with chlorides of the formula IV

65 2 - Procédé pour la préparation de composés de formule I selon la revendication 1, dans lequel R<sup>2</sup> et R<sup>3</sup>, qui peuvent être identiques ou différents, sont des radicaux hydrocarbonés aliphatiques, saturés ou insaturés, à chaîne droite ou ramifiée ayant 1 à 20 atomes de carbone, procédé comprenant la réaction d'un lyso-composé de formule II où R<sup>1</sup> est défini comme dans la revendication 1 dans un solvant organique inerte avec addition éventuelle d'un accepteur d'acide, avec les chlorures de carbamyle correspondants de formule IV

10 dans laquelle R<sup>2</sup> et R<sup>3</sup> sont tels que définis précédemment.

10 3 - Procédé selon la revendication 1, dans lequel un composé de formule II, dans laquelle R<sup>1</sup> est défini comme dans la revendication 1, réagit avec un composé de formule III, dans laquelle R<sup>3</sup> est un radical hydrocarboné aliphatique, saturé ou insaturé, à chaîne droite ou ramifiée avec 1 à 10 atomes de carbone, ou un groupe phényle, un groupe phényle monosubstitué par un méthyle, un méthoxy, un éthoxy, un fluoro, un chloro, un bromo ou un trifluorométhyle ou un groupe benzyle.

15 4 - Procédé selon la revendication 1, dans lequel un composé de formule II, dans laquelle R<sup>1</sup> est un radical alkyle à chaîne droite avec 16, 18 ou 20 atomes de carbone, réagit avec un composé de formule III dans lequel R<sup>3</sup> est un radical méthyle, éthyle ou isopropyle.

20 5 - Procédé selon la revendication 1, dans lequel un composé de formule II, dans laquelle R<sup>1</sup> est un radical hydrocarboné aliphatique, saturé ou insaturé, à chaîne droite avec 10 à 20 atomes de carbone, réagit avec un composé de formule III, dans laquelle R<sup>3</sup> est un radical hydrocarboné aliphatique, saturé ou insaturé, à chaîne droite avec 10 à 20 atomes de carbone.

25 6 - Procédé selon la revendication 5, dans lequel un composé de formule II, dans lequel R<sup>1</sup> est un radical alkyle à chaîne droite avec 16 ou 18 atomes de carbone réagit avec un composé de formule III, dans laquelle R<sup>3</sup> est un radical alkyle à chaîne droite avec 16 ou 18 atomes de carbone.

7 - Procédé selon la revendication 2, dans lequel un composé de formule II, dans laquelle R<sup>1</sup> est un groupe alkyle à chaîne droite ayant 16, 18 ou 20 atomes de carbone, réagit avec un composé de formule IV, dans laquelle R<sup>2</sup> et R<sup>3</sup>, qui peuvent être identiques ou différents sont des radicaux méthyle, éthyle ou isopropyle.
